

Splice_logo_multi_genes

The splice donor site is located at the very beginning of an intron
(-5 IS THE END OF EXON IN DONOR SEQ)

All splice site from multiple genes ()

Canocial donor site (GT)

```
## [1] "gene number:1071"
```

The splice acceptor site at the 3' end of the intron terminates the intron with an almost invariant AG sequence (-5 IS THE START OF EXON IN ACCEPTOR SEQ)

All acceptor site

Canocial acceptor site (AG)

[1] "gene number:1071"
